TEMO Unveils New Solarium Sunroom Design *Ultra-Modern Glass Roof Has Curve Appeal*

Clinton Township, Michigan (April, 2005) – TEMO Sunrooms, innovator and North American manufacturer of all-thermal sunrooms, introduced in January a radical new design for their Ventilated Solarium. It is one of seven sunroom models designed and manufactured by TEMO.

What makes TEMO's new Solarium different from their previous model and all other similar Solarium models on the market today is the extreme radius of the glass in the roof. By design it enables an expanded 36-inch overhead viewing area.

“The glass has sleek lines that make the Solarium look angular while retaining the soft curve in the front glass,” said Bob Walz, TEMO's resident Registered Professional Engineer who worked with TEMO's development team for two years on the new design.

“This is the most modern-looking curved glass in either the residential or commercial industry,” added Walz.

Special castings designed by TEMO make the unique curve possible. The TEMO Solarium features the industry's tightest corner radius which enables optimal roof sloping for water run off.

TEMO also designed new rafter extrusions for strength, beauty and function. Channels integrated into the rafter design route water to the header which contains a hidden large-capacity gutter. A downspout at either end of the room drops water directly to grade and away from the Solarium.

This triple drainage system provides leak-proof roof performance. It also diverts water away from the screens and glass of the wall systems for unobstructed viewing, even during rain.

Also new for TEMO is the type of glass used in the roof. It is insulated, with almost one-inch of dead air space. It is also UV-resistant with low-e coatings on the inside surface of the outside piece of glass.

Unlike solariums with all-glass roof designs, TEMO couples the insulated glass curve with their insulated solid roof panel system. This enables superior overall roof performance and resistance against heat or cold intrusion for excellent room comfort.

This system also reduces or eliminates condensation, which can lead to unhealthy and unsightly mold growth on surfaces.

New exterior finish trims attractively cover the rafter castings and simultaneously conceal screws for a smooth finish. Available interior crown molding conceals fasteners that connect the rafters to the header and also provides a bay for hidden accent lighting.

The new Solarium represents TEMO's mid-price product line. Retail pricing starts at approximately \$20,000. Like all TEMO's full line of sunrooms, the Solarium offers wide customization options.

The Solarium is available through more than 150 authorized dealers nationwide and in Canada. To learn more about TEMO sunrooms and the all-new Venitlated Solarium, call 800-344-8366 or visit www.temosunrooms.com.
